**Notes:** <sup>1</sup>Standard modules are fielded at all participating institutions. <sup>2</sup>Elective modules are chosen by participating institution from the options listed above. To ensure that the overall survey (standard modules+elective modules) remains reasonable in length, participating institutions typically choose 2 elective modules (2 half modules can be combined to account for 1 module). The number of items per module is determined by 2 factors: (1) skip logic embedded within the survey (i.e., some measures are assessed only for students with certain responses to survey items), and (2) which elective modules are selected by the participating institution. In terms of the order of modules presented to students, the 'Demographics' module is always first, followed by the 'Mental Health Status' module; the order of the remaining modules varies based on which elective modules are selected.

**ABOUT THIS DOCUMENT:**

**Contents:**

This document outlines all survey items included in HMS, beginning with the standard modules ('Demographics', 'Mental Health Status', and 'Mental Health Service Utilization/Help-Seeking') and then the elective modules. The final pages of the document include the survey endings (shown to student participants upon completing the survey).

Each module is presented within a table. Above each table is the module name (in all capital letters, bolded and underlined). Directly beneath the module name is the text shown to student participants at the beginning of that module. For example, students beginning the 'Demographics' module see the following text above the first question in that module: "Basic Information: *This section will ask you to provide basic information about yourself*". Information in the column 'Section' outlines organization within the module and is not visible to students within the survey.

**Color Coding:**

As noted above, some items are based on embedded skip logic within the survey (i.e., some measures are assessed only for students with certain responses to survey items). For example, only students who respond "No" to the question "Are you a United States citizen (or permanent resident)?" are asked the follow-up question "What is your country of citizenship (passport country)?" This follow-up question is shown in gray, indicating that the item is based on embedded skip logic.

HMS is a web-based survey. As such, there are numerous coding and programming decisions (*the vast majority of which are rather boring so we'll spare you*). A few are important: for example, many items allow student respondents to "Select all that apply". In some cases, one of the response options is 'mutually exclusive' meaning that a student respondent who selects that response option cannot select any of the other options (e.g., the response category "None" is mutually exclusive for the item "What activities do you currently participate in at your school?"). Programming notes are included in blue within the module tables.

Finally, certain items within the standard modules include a note in red (in the 'Citation/Notes' column) indicating that the item is included only if the elective module on that topic is not selected. In other words, a small number of items about important topics are included even if the elective module on that topic is not selected. This ensures that institutions have basic information about important topics that are not selected for in-depth assessment through elective modules. For example, if an institution does not select the 'Sleep' half module, a small number of items about sleep habits are included in the 'Mental Health Status' module. If an institution does select the 'Sleep' half module, the items about sleep are not included in the 'Mental Health Status' module (because sleep habits are being assessed separately in more detail through the 'Sleep' half module).

**[SURVEY ENDING #2, PART 1: SURVEY COMPLETERS, FEEDBACK]**

**You're almost done!**

Below is some personalized feedback based on your responses. Once you have read this information, please click "CONTINUE" to submit the survey and view a list of resources.

The Healthy Minds Study includes several commonly used screening tools that are used to determine symptom levels and risk for various mental health problems. Note that these results are not diagnoses but we hope they will help put things in perspective for you. Here's what your responses indicate:

Depression: You answered a series of 9 questions used to assess symptoms of depression. Scores range from 0 to 27, with higher scores indicating higher levels of depression. Scores are interpreted as follows: 0-4 "no signs of depression", 5-9 "mild depression", 10-14 "moderate depression", 15-19 "moderately severe depression", and 20-27 "severe depression". Your score is [\[insert score\]](#).

Anxiety: You answered a series of 7 questions used to assess symptoms of anxiety. Scores range from 0 to 21, with higher scores indicating higher levels of anxiety. Scores are interpreted as follows: 0-4 "no signs of anxiety", 5-9 "mild anxiety", 10-14 "moderate anxiety", and 15-21 "severe anxiety". Your score is [\[insert score\]](#).

Eating disorder: You answered a series of 5 questions used to assess symptoms of eating disorders. Scores range from 0 to 5, with higher scores indicating higher levels of disordered eating. A score of 2 or higher is considered a positive screen for an eating disorder. Your score is [\[insert score\]](#).
